

AI Marketing Automation Stack for Roastline Coffee

Prepared for Roastline Coffee GmbH · January 22, 2026

Client	Roastline Coffee GmbH (DTC speciality coffee, ~€2.4M ARR)
Engagement	Fixed scope build + 6-month optimisation retainer
Timeline	6 weeks build, ongoing
Investment	€6,200 (build) + €450/month (retainer)
Channels	Email (Klaviyo), SMS (Twilio), on-site, paid social briefs

Executive Summary

Roastline's current marketing operation is strong on creative but thin on automation: your team writes excellent newsletter copy, but abandoned-cart and post-purchase flows are still generic, segmentation is manual, and product launch announcements take six hours to brief across email, SMS, and paid social. This proposal builds a Claude-powered automation layer on top of your Klaviyo and Shopify stack that should reclaim 12 to 16 hours of marketing time per week and lift email-attributed revenue by 18 to 25% based on benchmarks from comparable engagements.

Understanding of Requirements

From our discovery sessions, the pain points are: (1) abandoned-cart emails are static and convert at 6.1% — well below the 9–11% speciality-food benchmark; (2) the post-purchase sequence does not differentiate between first-time and repeat buyers; (3) product launch briefs require manually rewriting the same story for five channels; (4) review-request emails go out on a fixed delay rather than triggered by actual delivery confirmation.

Proposed Solution

Personalised abandoned-cart agent

Replaces your three-email static sequence with a Claude-driven generator that personalises copy by cart contents, customer history, and roast-day proximity. Subject lines and body copy regenerate per send, with a content-safety filter that prevents common DTC anti-patterns (false scarcity, fake discount stacking).

Post-purchase concierge flow

Branches into first-time-buyer education (brewing guides for the specific beans purchased) and repeat-buyer loyalty (subscription nudge, referral). The flow reads from Shopify order data and writes events back to Klaviyo, so all reporting stays in your existing dashboards.

Multi-channel launch brief

A single internal tool where your marketing manager pastes the launch brief once. Claude generates: a long-form email, a 480-character SMS, three Instagram captions at different lengths, and a 90-word Meta Ads brief. Output is in Roastline's voice — calm, specific, never hyperbolic — based on a style guide we co-author in week one.

Delivery-triggered review requests

We replace the time-based review email with one triggered by the carrier's delivery webhook (DHL and Hermes), sent four days after actual receipt. Review-request open rate in our prior projects moves from 31% to roughly 48% with this change alone.

Project Timeline

Week	Milestone	Deliverable
1	Voice & style guide	Approved tone document, banned phrases list
2	Abandoned cart V1	Live A/B test against current sequence
3	Post-purchase flow	First-time vs. repeat-buyer branches deployed
4	Launch brief tool	Internal tool live for the marketing team
5	Review trigger + analytics	Delivery webhook, dashboard, win/loss tracking
6	Optimisation	First retainer-cycle review and tuning

Pricing

Component	Cost
Discovery, voice guide, integration setup	€1,800
Abandoned-cart and post-purchase flows	€2,000
Multi-channel launch brief tool	€1,400
Delivery-triggered review system + analytics	€1,000
Monthly optimisation retainer (6-month minimum)	€450 / month
Estimated Claude API usage	~€60 / month at current send volume

Relevant Experience

We have built similar marketing automation layers for two DTC brands of comparable scale: a natural skincare brand in Berlin (+22% email-attributed revenue in the first quarter post-launch) and a craft tea importer in Vienna (+38% on review-collection rate, +14% on subscription conversion). Both case studies are available on request and the Berlin client is reachable as a reference.

Why Nexrai Labs

- We sit on top of your existing tools — Klaviyo, Shopify, Twilio — rather than asking you to migrate.
- Voice and tone are co-designed with your team, not borrowed from a generic AI marketing template.
- We measure against your existing Klaviyo dashboards, so attribution stays consistent.
- Senior implementation, no junior layer.

Appendix

References on request. Sample style guide, mock launch brief output, and abandoned-cart copy in two voices (yours and a generic competitor's) are included in the shared folder.
